PROFILE

Product designer and front-end developer working across UI/UX, visual systems, and data-heavy interfaces. I design the interface, then build it in code.

EDUCATION

BITS Pilani, Hyderabad Campus - MSc Physics + B.E. Electrical and Electronics Aug. 2024 - Present

EXPERIENCE

Freelance Full-Stack Developer & Designer - Multiple clients, Remote Feb. 2026 - Present

- Designed and shipped brand-led portfolio sites and responsive product interfaces, owning each project from visual direction and information architecture to front-end build and delivery.
- Built a full-stack retail inventory and ordering platform with Next.js, PostgreSQL, and TypeScript.
- Produced 30+ event visuals for BPHC cultural, technical, and esports programming, using repeatable layout rules to keep distinct events recognisable. [View gallery](#)

Summer Intern - Beijan, BITS Pilani, Hyderabad May 2026 - Jul. 2026

- Redesigned and rebuilt [beijan.com](#) with Next.js, Tailwind CSS, and interactive Three.js elements for a defense/autonomous-systems brand.
- Developed a React hardware-telemetry viewer for flight and navigation data, built for fast scanning and analysis.

Quantum Computing Team Lead - IEEE Student Branch, BPHC Feb. 2025 - Present

- Designed and built the team's website, [Quantum Feynatics](#), covering events, technical context, and a consistent visual identity.
- Hosted nearly 100 participants at Qiskit Fall Fest 2025 (workshops, panels, 12-hour hackathon); led Quantumverse Vol. 3 and secured an IBM Quantum-sponsored partnership.

SELECTED WORK

StoneForge Research Website - Website redesign and implementation [Live site](#)

- Redesigned and built the public site for a research startup making portable electromagnetic imaging systems for non-destructive infrastructure inspection.
- Structured the site around a scan-to-3D-map story covering the sensing workflow, limitations, proof points, and deployment use cases.

Drift Log Analyzer - Data visualization, telemetry UI [Live site](#)

- Designed and built a browser tool that combines 3D flight trajectories, anomaly flags, and synchronized video in a single view.
- Built the interaction around linking motion, event markers, and footage, so users can move from spotting an anomaly to diagnosing it.

Temporal Oracle - Interactive forecasting interface [Live site](#)

- Designed a game-like forecasting interface built around scenario selection, prediction states, and calibration views.
- Gave users clear feedback on scenario outcomes and how well-calibrated their predictions were.

SKILLS

Design: UI/UX, interaction design, visual design, information architecture, responsive web design, prototyping, data visualization

Tools: Figma, Photoshop, Illustrator, Affinity Designer

Development: React, Next.js, Tailwind CSS, TypeScript, JavaScript, Three.js, Plotly, Python, SQL, PostgreSQL, Git
